

# Project Executable Files

|              |                                                    |         |                                         |
|--------------|----------------------------------------------------|---------|-----------------------------------------|
| Date         | 30 September 2026                                  | Team ID | 6ab22029e880316a482c5f2a                |
| Project Name | EduGenie – AI-Powered Educational Assistant        | GitHub  | https://github.com/theopintheo/EduGenie |
| Team Members | Theopin B, Antony Ragul A, Saravanan S, Karthick M | Status  | Completed / working implementation      |

| Item                   | Status       | Included / Notes                                                                      |
|------------------------|--------------|---------------------------------------------------------------------------------------|
| Complete source code   | Yes          | EduGenie Source Code folder.                                                          |
| README / Setup Guide   | Yes          | README and docs/SETUP_GUIDE.md.                                                       |
| Dependency file        | Yes          | requirements.txt.                                                                     |
| Database schema / seed | N/A          | No persistent application database currently.                                         |
| .env.example           | Recommended  | Add sanitized example before public submission; never commit keys.                    |
| Deployed URL           | N/A          | No verified production URL in supplied files.                                         |
| APK / executable       | N/A          | Current project is a web app.                                                         |
| Dockerfile             | N/A          | Not present in supplied project.                                                      |
| Test files / results   | Partial      | Manual workflow/testing documentation exists; formal load-test evidence not supplied. |
| Demo video             | Not supplied | Add if required.                                                                      |

## File / Folder Structure

EduGenie Source Code/  
main.py  
ai\_service.py  
qna.py  
explanation\_module.py  
summary\_module.py  
quiz\_module.py  
learning\_path.py  
requirements.txt  
templates/index.html  
static/app.js  
static/style.css  
docs/\*.md

## Run Instructions

Install Python 3.10+ → create/activate venv → pip install -r requirements.txt → create .env with GEMINI\_API\_KEY → run uvicorn main:app --reload → open the local URL and /docs.
